This user guide provides the details of Menus in Salusfin Control Centre.

Control Centre show all components you have installed.

Dashboard

Dashboard is only for solutions with Power Reader installed.

The Dashboard helps you to keep track of energy consumption details.

Notifications

Get information of events from the Gateway such as Battery Empty or if something went wrong in the installation.

Schedule page Binary Plugs

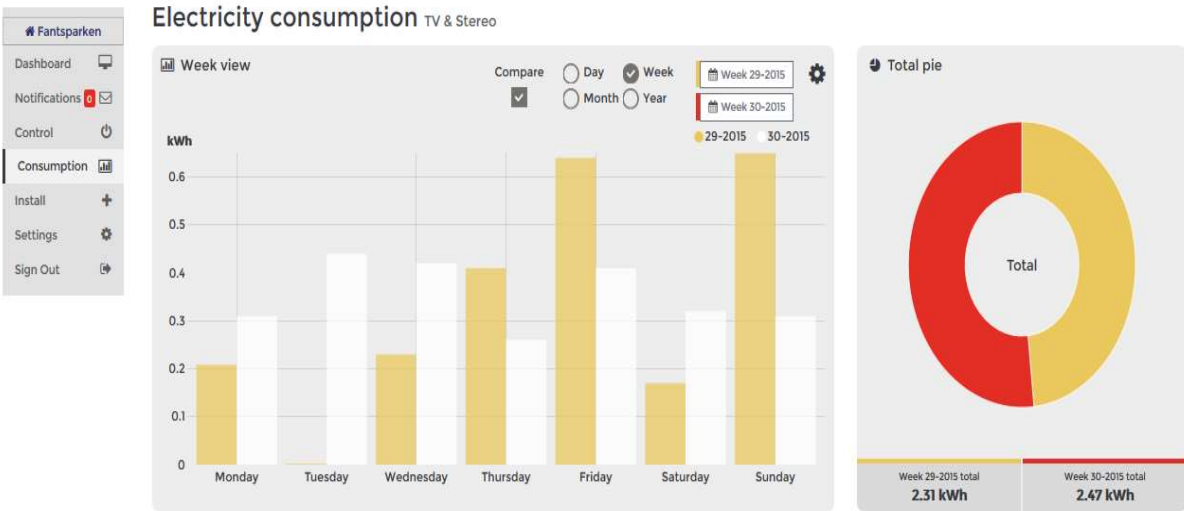

Advanced schedule settings

Setting	Value
Default value *	<input type="checkbox"/> OFF
Vacation mode **	<input type="checkbox"/> OFF

* The default value represents the state of the plug when no program is set
** Vacation mode sets the state of the plug to be constantly OFF

Consumption

Compare data for a specific appliance during certain times and also see the cost of having the appliance on. You can also export Raw data to Excel

Settings

The following can be done using Settings option:

Set the language of the UI (English available at the moment).

Set/Modify budget for Dashboard.

Power Reader Settings: Current meter value, Impulse factor and Range Test

Change name of the house and Gateway Configuration.

Settings Center
